Tooth / Soft tissue 3D Scanning

Ultra-Precise 3D Data Through Photogrammetry

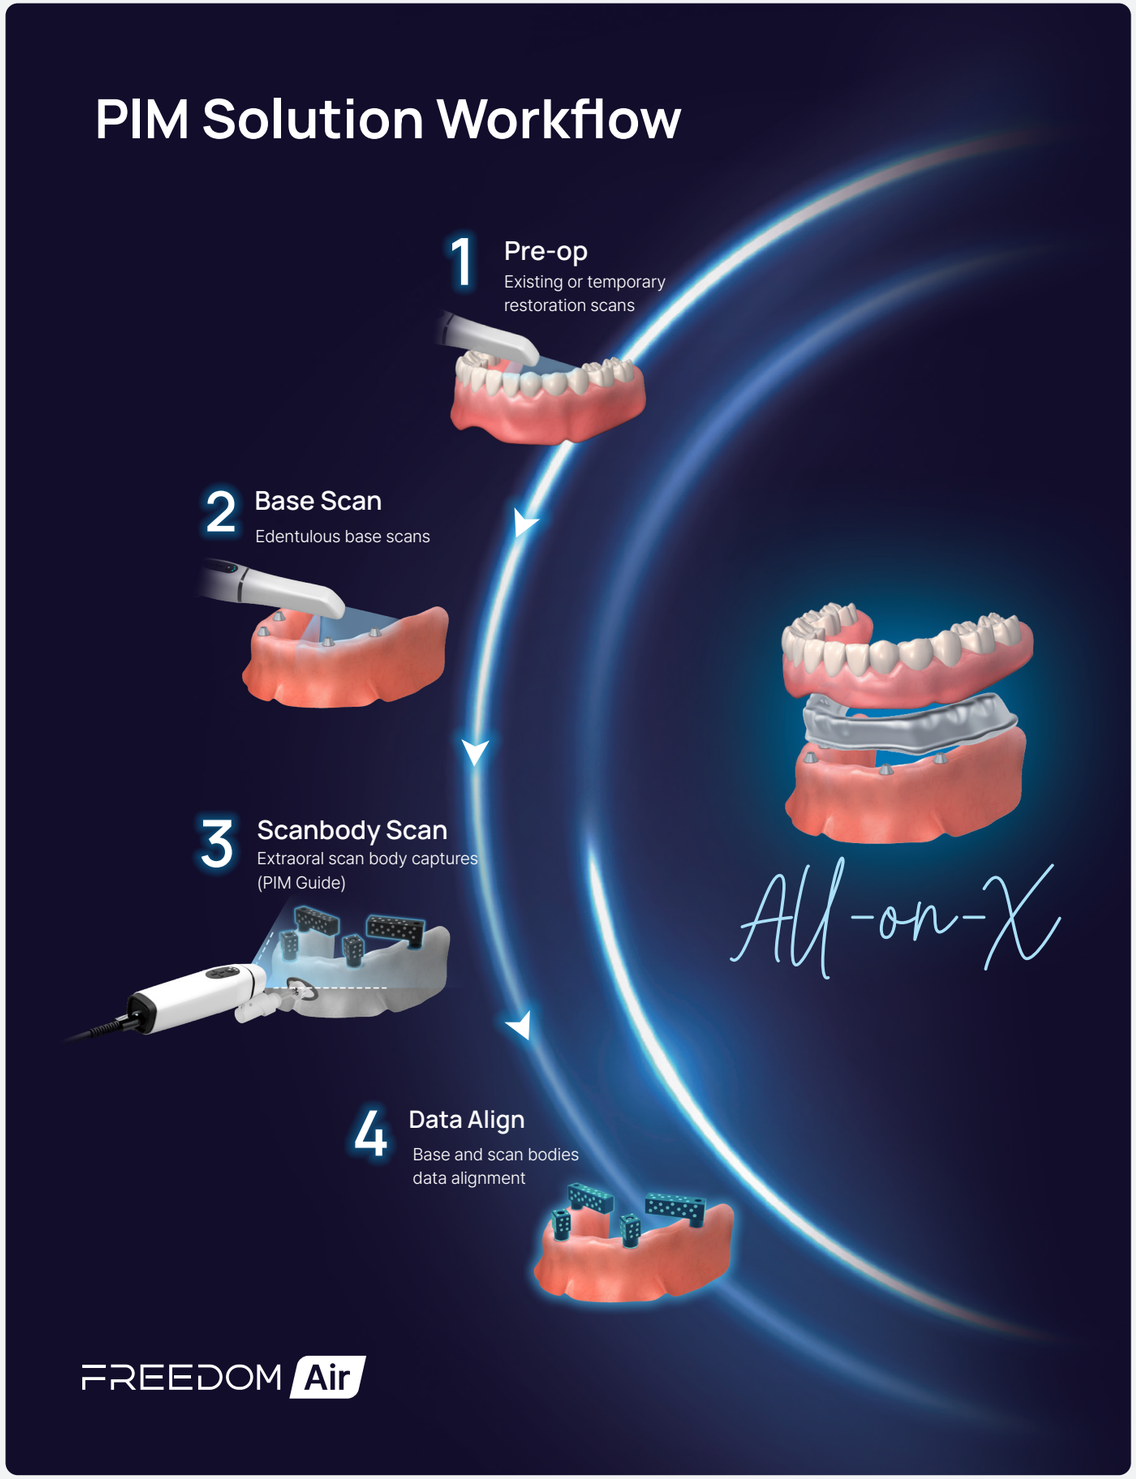

Captures multi-angle images simultaneously to generate distortion-free 3D data and accurately record scanbody positions.

PIM Solution Precise Implant Measurement Solution

Powered by extraoral photogrammetry and an illumination-enhanced guide,
it captures wide areas in a single shot and instantly recognizes implant positions—no stitching required.

PIM Scanbody Scan Process

PIM KIT Components

Components		QTY	Image
▪ Scan Body	PG SQ Scanbody (Short, 5*5*9 mm)	6	
	PG L Scanbody (Long, 20*5*9 mm)	2	
	6061 Aluminum (a high-strength aluminum alloy)		
▪ Hand Driver (Hex 1.2)		2	Short x 1 Long x 1
▪ Torque Ratchet(35N)		1	

* Screw-integrated scanbody connected to the MUA to capture the implant's 3D position during PIM scanning.

* Sterilization required before use. (Autoclave at 134°C for 15 min, followed by 30 min drying)

Compatible Multi-Unit Abutment

Type	Compatible MUA
NC	Nucleoss

About DOF Inc.

DOF is a CAD/CAM solution company specializing in developing the world's best 3D dental scanners and dental milling machines. Since the foundation in 2012, DOF has been bringing a new sensation to the industry and has been indicating a rapid growth through developing camera moving scanners. DOF always leads the market through developing innovative products such as FREEDOM X5, a 5-megapixel 3D dental scanner boasting the highest precision in the world, and FREEDOM F, a face scanner capable of directly reproducing the face of a patient into 3D data.

DOF promises to grow as we communicate with our customers. Every product provided by DOF is planned and designed through taking into consideration what functions are required by our customers and what may be considered inconvenient by our customers. Even after a product is complete, DOF continuously applies the feedback provided by our customers to improve our products. To help our customers work more conveniently and joyfully is the dream and future DOF envisions.
